Professional Summary

Junior Software Developer with a Diploma in Information Communication Technology (Application Development) and hands-on experience building web, desktop, and mobile applications. Skilled in full-stack development, with React frontend and Django backend experience, as well as Java, C#, ASP.NET, Python, and SQL. A motivated problem solver eager to contribute to real-world software development while continuing to grow technically.

Education

Diploma in Information Communication Technology – Application Development

Sol Plaatje University | 2023–2025

Relevant focus areas:

- Software Development
 - Web Development
 - Database Systems
 - Mobile Application Development
 - Software Engineering
-

Technical Skills

- Programming Languages: JavaScript, Python, Java, C#, SQL, HTML, CSS Frontend
 - Frameworks: React Backend Frameworks: Django, ASP.NET, REST API Development Mobile
 - Development: Android (Java) Databases: MySQL, SQLite, SQL Server Other Tools/Technologies: OpenCV, Tiny Face Detection Models, Git, VS Code
-

Academic Projects

Lingerie & Swimwear E-Commerce Website

Developed a full-stack e-commerce web application that allows users to browse and purchase lingerie and swimwear products online.

Key Contributions

Frontend (React)

- Built a responsive user interface for product browsing and shopping
- Implemented product catalog, shopping cart, and checkout functionality
- Designed a clean and user-friendly shopping experience

Backend (Django)

- Developed backend APIs for product management and user authentication
- Implemented database functionality for storing products and order data
- Connected backend APIs to the frontend interface to enable full system functionality

Technologies Used

React, Django, JavaScript, HTML, CSS, SQL

Student Task Management & Attendance System

Web-based system to help students manage academic tasks and track attendance efficiently.

Key contributions:

- Implemented face recognition attendance marking using Tiny Face detection models with OpenCV for real-time processing
- Developed interactive dashboards for task tracking, reminders, and student progress using React frontend
- Designed and integrated database systems for storing student records and tasks
- Built backend functionality with Python and Django

Technologies used:

Python, Django, OpenCV, React, JavaScript, HTML, CSS

Focus Mate Student Productivity Dashboard

Designed a web dashboard to help students manage digital distractions and improve productivity.

Key contributions:

- Implemented a focus timer for structured study sessions
- Developed task tracking and progress monitoring tools
- Created an interactive dashboard interface for student productivity

Technologies used:

React, JavaScript, HTML, CSS

Soft Skills

- Analytical problem solving
 - Team collaboration
 - Time management
 - Communication skills
 - Adaptability and quick learning
-

Additional Information

- Strong understanding of object-oriented programming
- Experience developing web, desktop, and mobile applications
- Familiar with software development, lifecycle and debugging practices

Dear Hiring Manager,

I am writing to express my interest in the Junior Full Stack Developer position at your organization. I recently completed a Diploma in Information Communication Technology (Application Development) at Sol Plaatje University, where I gained strong practical experience in software development, web technologies, and database systems. Over the past three years, I have worked on several academic and personal projects that allowed me to build full-stack applications and strengthen my problem-solving abilities.

One of my key strengths is my ability to work across both the frontend and backend of an application. I have developed responsive and interactive user interfaces using React, JavaScript, HTML, and CSS, while also building backend functionality using Python and Django. Through these projects, I have implemented REST APIs, integrated databases, and developed features that connect the frontend interface with backend systems to create fully functional applications.

For example, I developed a full-stack e-commerce website for lingerie and swimwear products where I built the frontend interface using React and implemented backend APIs using Django to manage products, users, and orders. I also created a Student Task Management and Attendance System that included dashboards for task tracking and reminders, along with an AI-assisted attendance verification feature using face recognition with Tiny Face detection models integrated with OpenCV. These projects helped me gain hands-on experience working with databases, application logic, and modern web development practices.

In addition to web development, I have experience developing Android applications using Java and Android Studio, where I implemented mobile user interfaces, application logic, and data storage. Working across web and mobile platforms has strengthened my understanding of software architecture and object-oriented programming principles.

Beyond my technical skills, I am highly motivated, adaptable, and eager to learn. I enjoy solving complex problems and continuously improving my skills by working on practical projects. I am particularly interested in opportunities where I can contribute to real-world systems while learning from experienced developers and growing as a software engineer.

I would welcome the opportunity to contribute my technical skills, enthusiasm, and dedication to your team. Thank you for considering my application.

Kind regards,

Nobesuthu Gongo
